Community-driven DAO, which works for the welfare of animals.

Why? We will provide perks, and the sanctuary will tour five donations. We will give them an emotional reason to donate.

- If the user donates money, the donor will give an NFT.
- By adopting a pet, an NFT will be provided to the user.
- By sharing information about an animal who is in difficulty- Put the info in IPFS

Problem Statement: As we know, the number of endangered animals is increasing, and the condition of stray animals is getting worse daily. So, we are making a community-driven DAO dApp for the welfare of the animals.

Earlier, there was an intermediator, so donations could not deliver the funds to the right place. Through web3, we will decentralize the system, and donated funds can directly get transferred to the deserved place without centralizing the donations.

In web2, there are no perks for the benefit of users, which doesn't motivate them to help and be a part of this social cause.

Inspiration:

In our team, we all are animal lovers. Endangered animals are part of our history and culture; losing them would be a significant loss for future generations. Torture of stray animals is also increasing day by day. Many breeders torture animals for their fun. They live in very harsh conditions with no food and water for days. With our dApp, we aim to help animals relieve themselves from this pain and misery. And through this, we can increase awareness among people.

Our Solution:

Using Web 3, we are trying to make young generations more interested in saving animals. We have kept in mind people who can donate money and those who can't.

There are four significant ways through which a person can help in saving the animals.

1. Helping with NFT:- A person willing to help an endangered animal can support them by buying the NFT for that particular animal. All the money from that NFT will go towards helping the specific animal. After buying a certain amount of NFTs, the doner will get some perks as appreciation from our side.
2. Donating Design:- Designers willing to help towards a social cause can help us by donating designs for the NFT of the animal they like.Once their Design is sold, they will also get some perks.
3. Adopting Stray Animals:- People who don't have money and want to help animals and their welfare can also adopt stray animals. By adopting them, they will also get perks and NFT.
4. Providing Leads:- People can also help by providing information about the animals for adoption. After the animal is adopted, they get some perks and NFT for providing the information.
